

THE Exten (D.T.)² 10-STEP GUIDE

In the first meeting, the Exten.(D.T.)2 researchers explain the aim of the project and teachers share information regarding their courses. Suitability of the course(s) for the Exten.(D.T.)2 tools is discussed. Then, the teachers decide if they would like to take part in school interventions. Dates are arranged for the next steps.

Before the school intervention, all the teachers who agreed to be part in this project will be provided with support from Exten.(D.T.)2 researchers in various ways.

In the next meeting, teachers who are willing to take part in the school interventions fill in the details of the Design Thinking project. In this project, their students will use the Exten.(D.T.)2 tools that are mentioned in the activity plan.

All students and teachers are invited to take part in the data collection procedures. For this reason, they will be provided with an informed consent form. Their questions (if any), will be also answered before they sign it.

All students of the courses are asked to participate in the pre-survey (data collection for the improvement of the tools and for reporting on the project's achievements). The survey for the students is initially distributed to the teachers by the Exten.(D.T.)2 team. Pre-surveys are to be filled out during the first week of the course (or before the first lecture starts).

The researchers from the Exten.(D.T.)2 team will visit the school at least three times during the semester. They will attend the first class physically to explain the project and what their participation entails and help students with their technical questions, too. In the pitch session, students will present their work and the researchers will be there to give feedback.

The researchers from the Exten.(D.T.)2 team will help teachers and students by visiting the school or attending online to answer questions in between the sessions. The researchers will also attend the final event physically.

All students of the courses in which the Exten.(D.T.)2 tools and platform are used, are asked to participate in the post-survey. The post-survey is distributed to the teachers by the Exten.(D.T.)2 team in advance, and students shall fill it in in the last week of the course (or immediately after the school intervention ends).

After the course ends, the Exten.(D.T.)2 team invites students to interviews (or focus group sessions) in order to share their experience of using the Exten.(D.T.)2 tools and the platform. This activity is optional. Anonymity is ensured. Data collection is performed for the purposes of the Exten.(D.T.)2 project and associated research.

After the course ends, the Exten.(D.T.)2 team invites teachers to interviews in order to share their experience of their students using the Exten.(D.T.)2 tools and the platform and how they perceive this. This activity is optional. Anonymity is ensured. Data collection is performed for the purposes of the Exten.(D.T.)2 project and associated research.
